Between 1865 and 1870 three important amendments were added to the United State Constitution. Collectively known as the “Reconstruction amendments,” they were designed to secure the emancipation of four million southern slaves and protect their civil and political rights. In so doing the amendments dramatically altered the relationship between the federal government and the states. What prompted their adoption, how much did they actually alter, and what is their significance today? These are questions that historians and constitutional scholars continue to debate. This seminar will introduce participants to these issues by tracing the origins and significance of the thirteenth, fourteenth, and fifteenth amendments.
